

SMART TICKET FOR MOTOTRBO RADIOS

The easy way to handle tasks and alarms on a MOTOTRBO radio

Let's face it – usability on a radio has never been particular good. Compared to modern devices like Smartphones, Tablets and BlackBerry's the usability of a radio falls behind.

ZONITH is now taking usability to the next level by introducing the Smart Tickets for MOTOTRBO radios. Smart Tickets is an app loaded into the Generic Option Board (GOB) of a MOTOTRBO radio. With the Smart Ticket app the radio users do no longer need to handle alarms and tasks in blindness.

Job Ticket app presents alarms and tasks in simple way on the display of all the alerted radios.

✓ Once the message is read the user is given the choice of accepting or cancelling the alarm or task.

❓ If Accepted the other radios which have received the same message are unaware of this because the alarm is still in their list.

In this way many misunderstandings about if anyone has signed up for a particular task occur.

Smart Ticket app presents alarms and tasks in clear text on the display of all the alerted radios.

✓ Once the message is read the user is given the choice of accepting or cancelling the alarm or task.

✓ If Accepted the other radios which have received the same message are notified in the background and the alarm is removed from their list. In this way no misunderstandings about if anyone has signed up for a particular task will occur.
